

Compensation AI Acceptable Use Guidelines (Draft)

Purpose

Provide practical guidance for the responsible use of AI in Compensation while protecting employee data, ensuring compliance, supporting pay equity, and maintaining human decision-making.

Applies To

Compensation staff using AI tools or AI features in approved systems (e.g., U of A GenAI, JDXpert, MarketPay, Monday.com).

Related University Guidance

Before using any AI tool or AI-enabled feature, staff should review the **University of Arizona AI Tools & Data Use Guide**: <https://responsibleai.arizona.edu/ai-tools-guide>. Approval of a base software platform or AI tool does not automatically mean every embedded AI feature is approved for every data type or workflow. If staff are unsure whether a tool, feature, or data type is allowed, they should pause and confirm before use.

This unit guideline should be used alongside university guidance to confirm whether a tool, AI feature, or data type is appropriate for the intended use.

Key Definitions

- **AI-generated content**
Content whose primary substance was created by AI with minimal human revision.
- **AI-assisted content**
Human-authored work supported by AI for tasks such as drafting, summarizing, organizing, or formatting.
- **Approved AI tool**
An AI system or AI feature within an institutionally approved platform that is authorized for the relevant data classification and Compensation use case.

AI May Be Used To

- Draft or summarize emails, reports, templates, SOPs, and compensation guidance.
- Assist with job description development.
- Suggest market survey matches for analyst review.
- Support administrative workflows using de-identified or synthetic data.
- Organize or summarize information for analyst review.

AI May Not Be Used To

- Upload identifiable employee or applicant data into unapproved AI tools.
- Make classification, MQ/relevant experience, promotion, or pay decisions.
- Infer protected characteristics or evaluate "culture fit."
- Share AI-generated content without human review.
- Treat AI recommendations as authoritative.

Human Oversight

- A Compensation analyst reviews and validates all AI outputs.
- AI supports analysis—it does not make decisions.
- Final responsibility remains with Compensation staff.

Using AI in Vendor Systems

Before using AI features in approved software:

- Confirm the feature is approved for the intended use.
- Understand what data the feature processes or stores.
- Use the minimum necessary data.
- Prefer de-identified or synthetic data when testing new features.
- Pause use if approval is unclear.

Documentation

Significant AI use should record:

- The AI tool or feature used.
- How AI assisted the work.
- The human review performed before the output was used.

Owner: Director of Compensation
